

Term project presentation guidelines

Term projects will be developed in groups of two people, and the presentation will consist of

- Class presentation (7 mins + 3 mins for questions).
- A documented netbook containing the complete project.
- A 10~12 page report including dataset description, data preparation and analysis, results and discussion).
- In each and every decision, justify your choices!

Please prepare a single python notebook with the answers. However, feel free to use more than a single python file to solve tasks. If necessary, some results may be pre-computed and stored in separate files.

Notebooks must clearly explain the answers to each question, supported by evidence derived from the data and visualized using the tools presented in class.

Describe the characteristics of the data you were given as well as your reasoning process leading to each answer. Use the following structure template for the answers notebook:

- Project title, task name
 - Description and data characterization
 - Answer to question 1
 - Answer to question 2
-
